### **Disclaimer**

Considerable effort has been made to ensure that the contents of this document are free from inaccuracies and omissions. However, Renishaw makes no warranties with respect to the contents of this document and specifically disclaims any implied warranties. Renishaw reserves the right to make changes to this document and to the product described herein without obligation to notify any person of such changes.

### **Trademarks**

All brand names and product names used in this document are trade names, service marks, trademarks, or registered trademarks of their respective owners.

## **Part alignment - plane, line and point (CAD)**

## Care of equipment

Renishaw probes and associated systems are precision tools used for obtaining precise measurements and must therefore be treated with care.

## Changes to Renishaw products

Renishaw reserves the right to improve, change or modify its hardware or software without incurring any obligations to make changes to Renishaw equipment previously sold.

## Warranty

Renishaw plc warrants its equipment for a limited period (as set out in our Standard Terms and Conditions of Sale) provided that it is installed exactly as defined in associated Renishaw documentation.

Prior consent must be obtained from Renishaw if non-Renishaw equipment (e.g. interfaces and/or cabling) is to be used or substituted. Failure to comply with this will invalidate the Renishaw warranty.

Claims under warranty must be made from authorised service centres only, which may be advised by the supplier or distributor.

## Trademarks

Windows 98, Windows XP, Windows 2000 and Windows NT are registered tradenames of the Microsoft Corporation.

IBM is the tradename of the International Business Machines Inc

All trademarks and tradenames are acknowledged.

# **1 Part alignment - plane, line and point (CAD)**

## **1.1 Tutorial pre-requisites**

- The student should be familiar with the 'Principles of part alignment'

## **1.2 Tutorial objectives**

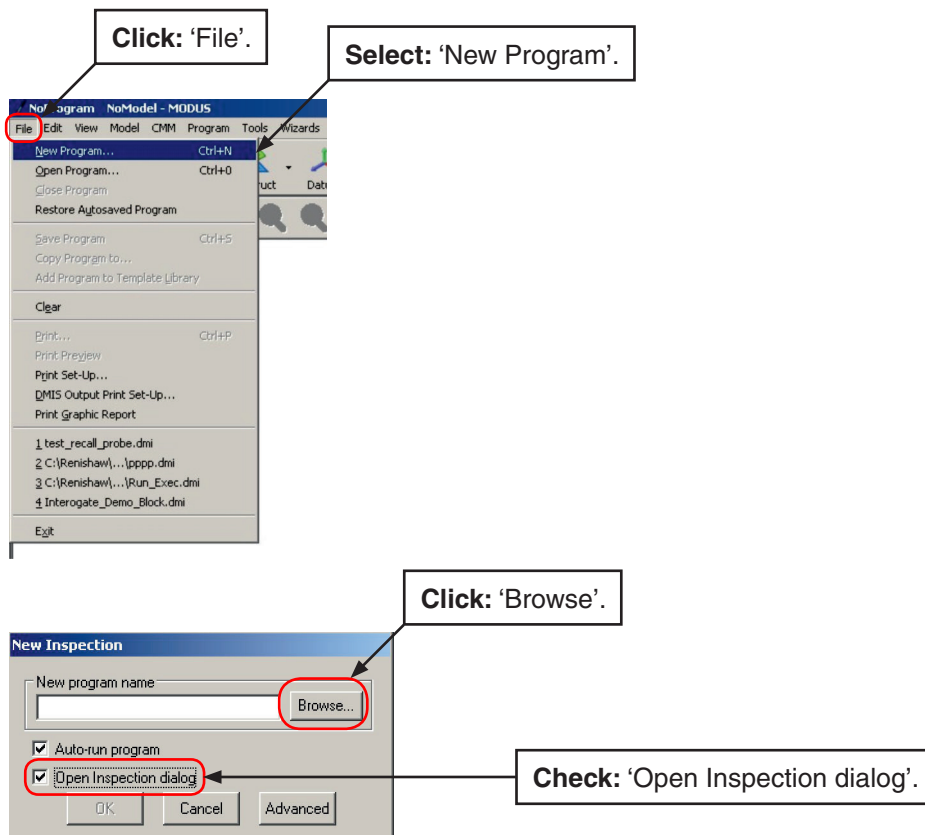

- Introduction to the fundamentals of creating a MODUS inspection program
- Concepts and definitions of nominal and actual features
- Familiarisation with text (DMIS) based programming
- Introduction of basic alignment operations

## 2 Introduction

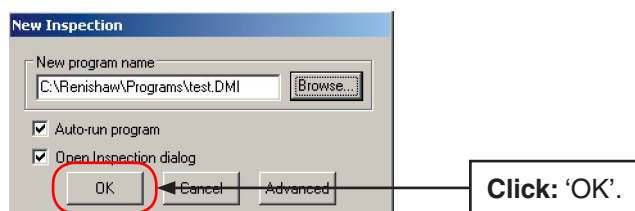

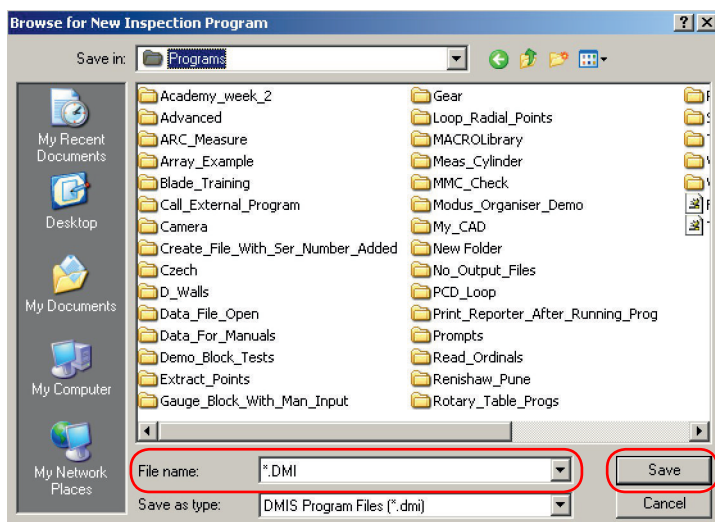

This tutorial introduces the student to manual measurement of features on the Renishaw training block and basic concepts of prismatic part alignment.

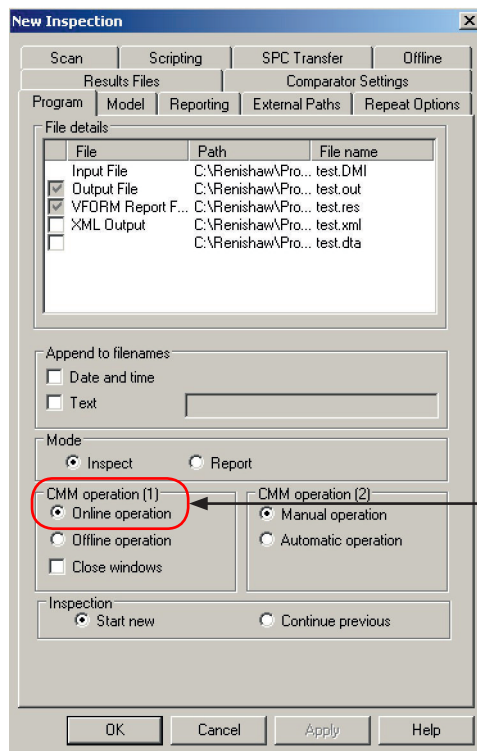

This tutorial will make use of a CAD model for feature nominal definition and visualisation purposes.

### 3 Create a new program

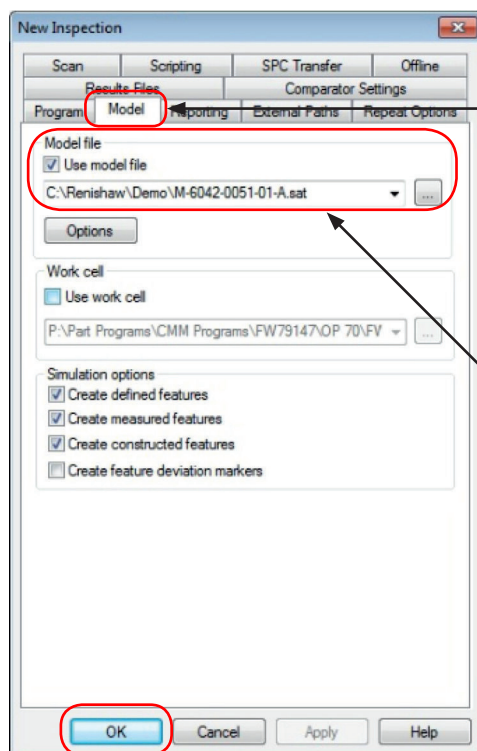

Enter the new program name in 'File name' then click 'Save' to continue:

**Check: 'Online operation'.**

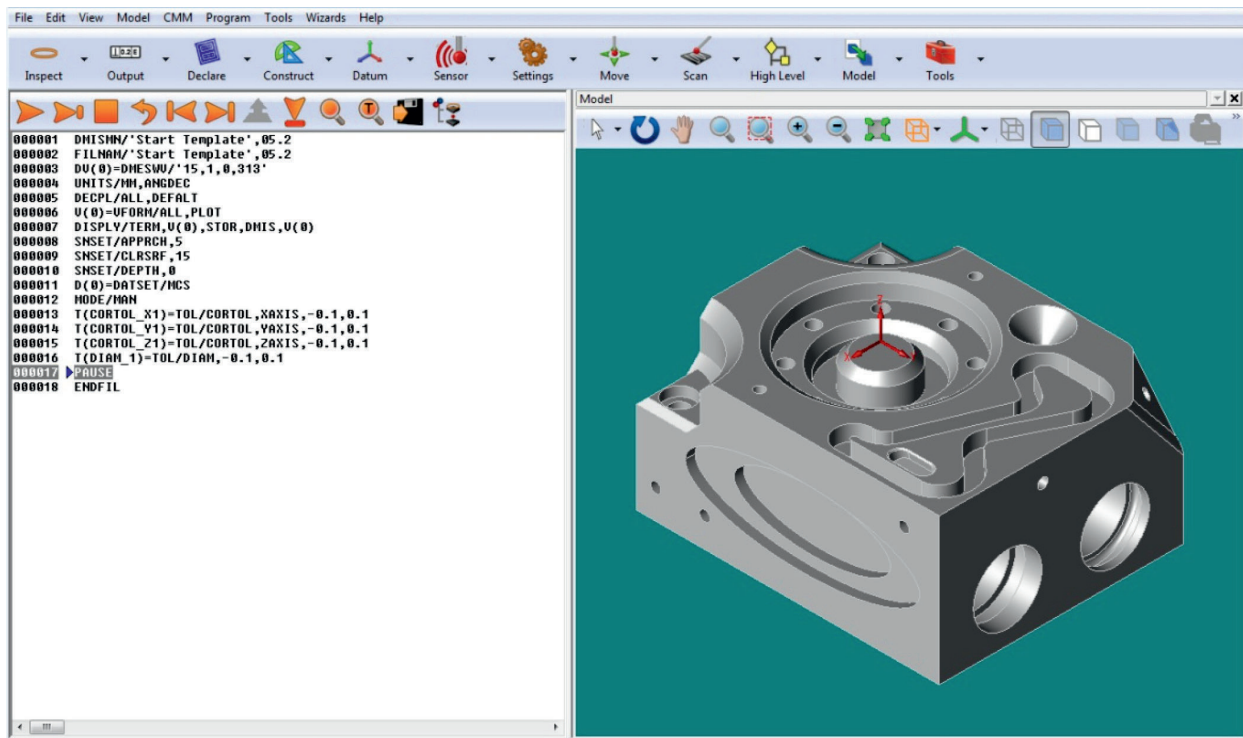

**Select: 'Model' tab.**

**Check: 'Use model file' and browse to the correct model.**

**Click: 'OK' to continue.**

The following header will be inserted into the program with the selected model:

**NOTE:** This header can be edited to suit specific requirements. It can be found in:-

<C:\Program Files\Renishaw\Modus\n,n\Template.dmi>

Next insert some line spaces to make the program easier to read. Press

Enter a space here and then press return.

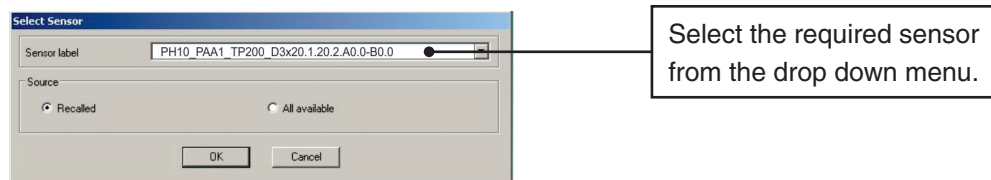

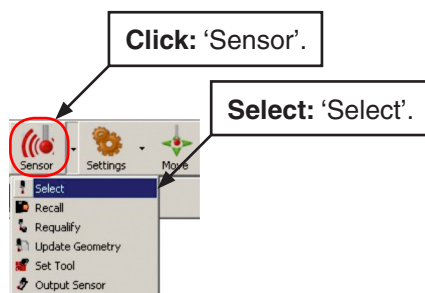

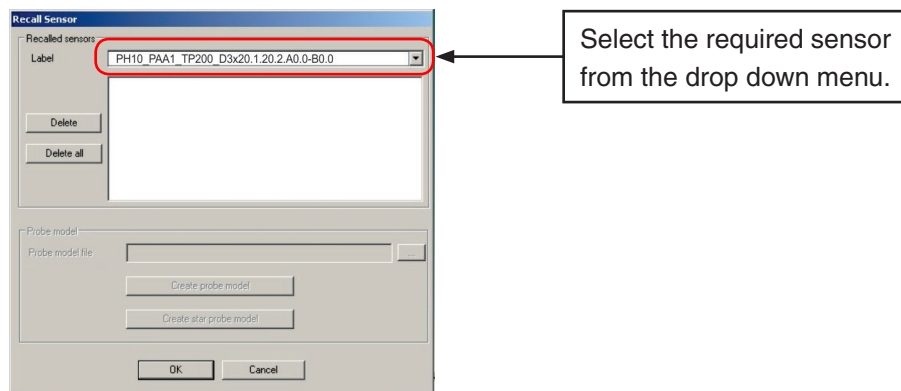

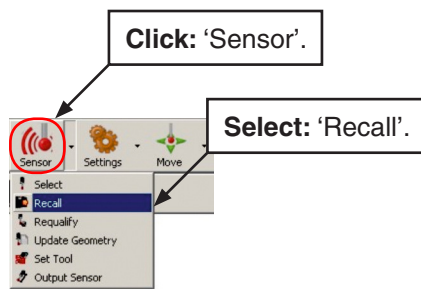

```

000003 DU(0)=DMESWU/'13,1,2,212'
000004 UNITS/MM,ANGDEC
000005 DECPL/ALL,DEFAULT
000006 U(0)=UFORM/ALL,PLOT
000007 DISPLY/TERM,U(0),STOR,DHIS,U(0)
000008 SNSET/APPRCH,5
000009 SNSET/CLRSRF,15
000010 SNSET/DEPTH,0
000011 D(0)=DATSET/MCS
000012 MODE/MAN
000013 T(CORTOL_X1)=TOL/CORTOL,XAXIS,-0.1,0.1
000014 T(CORTOL_Y1)=TOL/CORTOL,YAXIS,-0.1,0.1
000015 T(CORTOL_Z1)=TOL/CORTOL,ZAXIS,-0.1,0.1
000016 T(DIAM_1)=TOL/DIAM,-0.1,0.1
000017
000018
000019
000020
000021
000022 PAUSE
000023 ENDFIL

```

Place the cursor on line 000018.

```

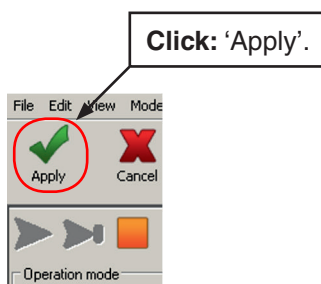

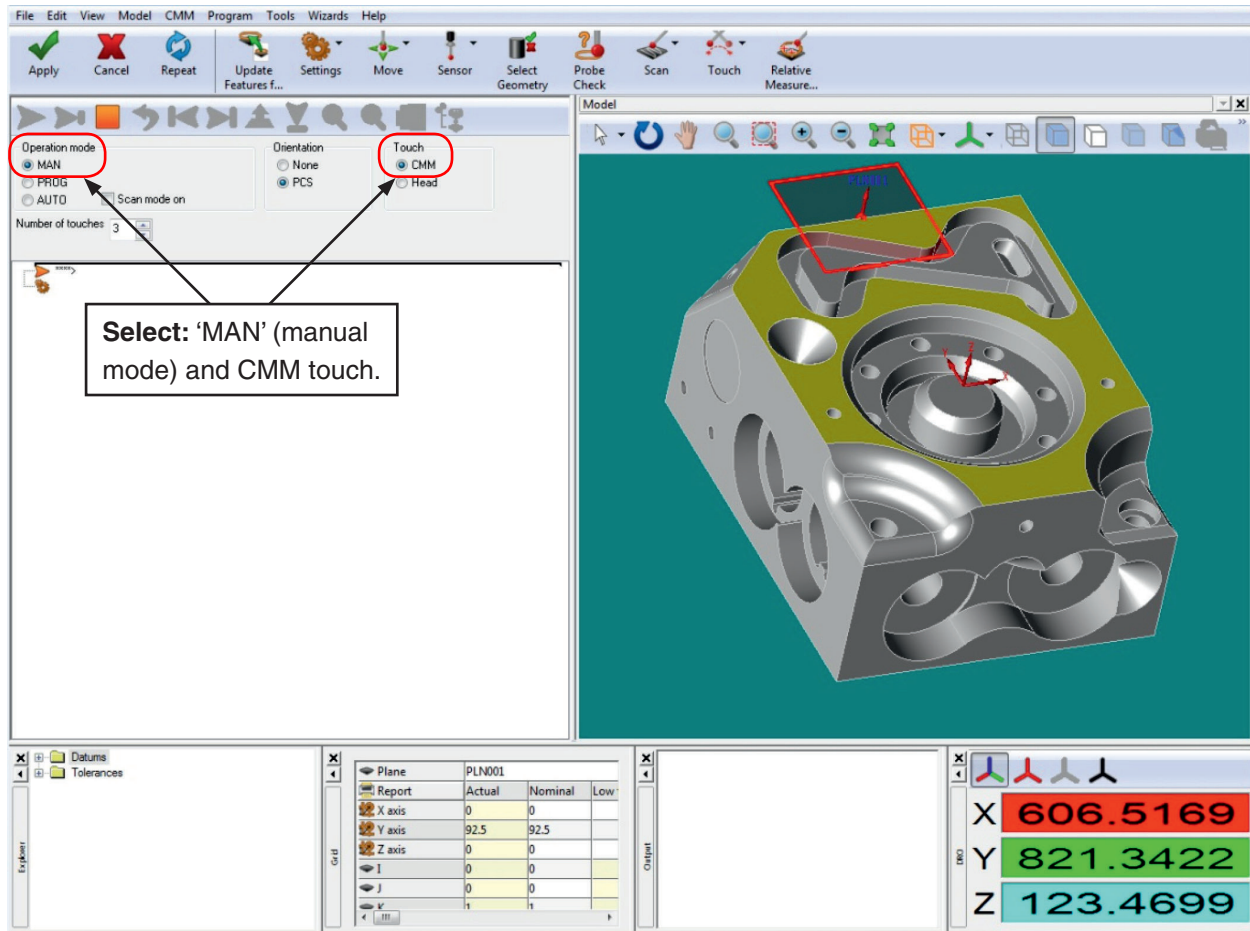

000012  MODE/MAN
000013  T(CORTOL_X1)=TOL/CORTOL,XAXIS,-0.1,0.1
000014  T(CORTOL_Y1)=TOL/CORTOL,YAXIS,-0.1,0.1
000015  T(CORTOL_Z1)=TOL/CORTOL,ZAXIS,-0.1,0.1
000016  T(DIAM_1)=TOL/DIAM,-0.1,0.1
000017
000018  RECALL/SA(PH10_PAA1_TP200_D3x20.1.20.2.A0.0-B0.0)
000019  SNSLCT/SA(PH10_PAA1_TP200_D3x20.1.20.2.A0.0-B0.0)
000020  ▶
000021
000022  PAUSE
000023
000024  ENDFIL

```

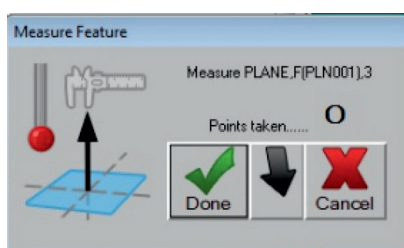

The program will now have two additional lines which recalls and selects the tool.

## 4 Measure a plane, line and point

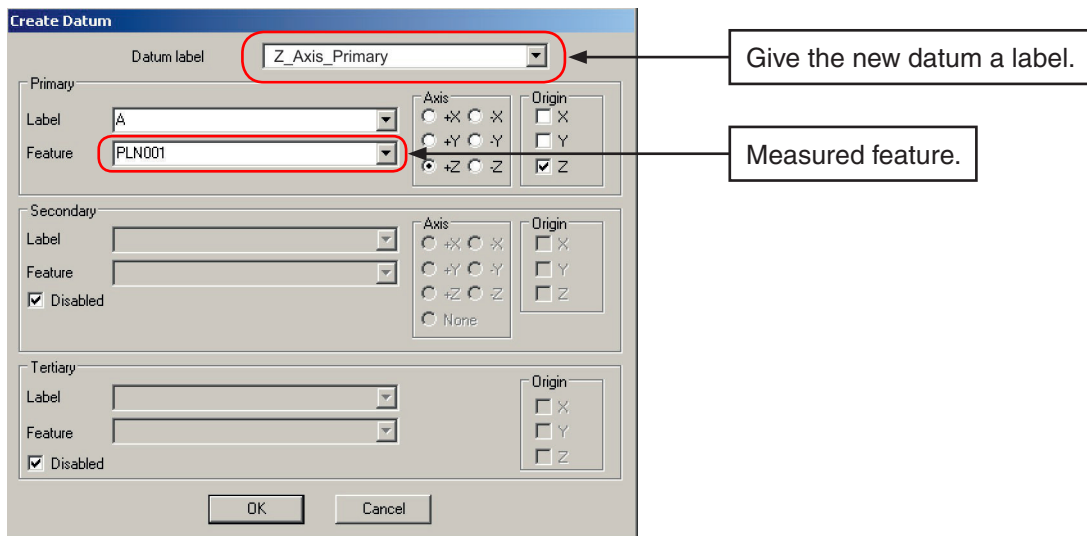

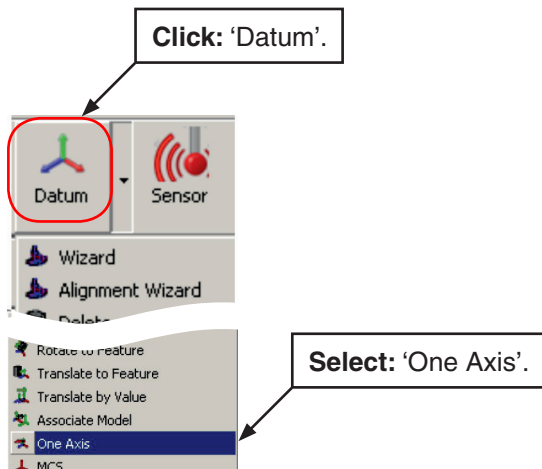

Select the plane to inspect:

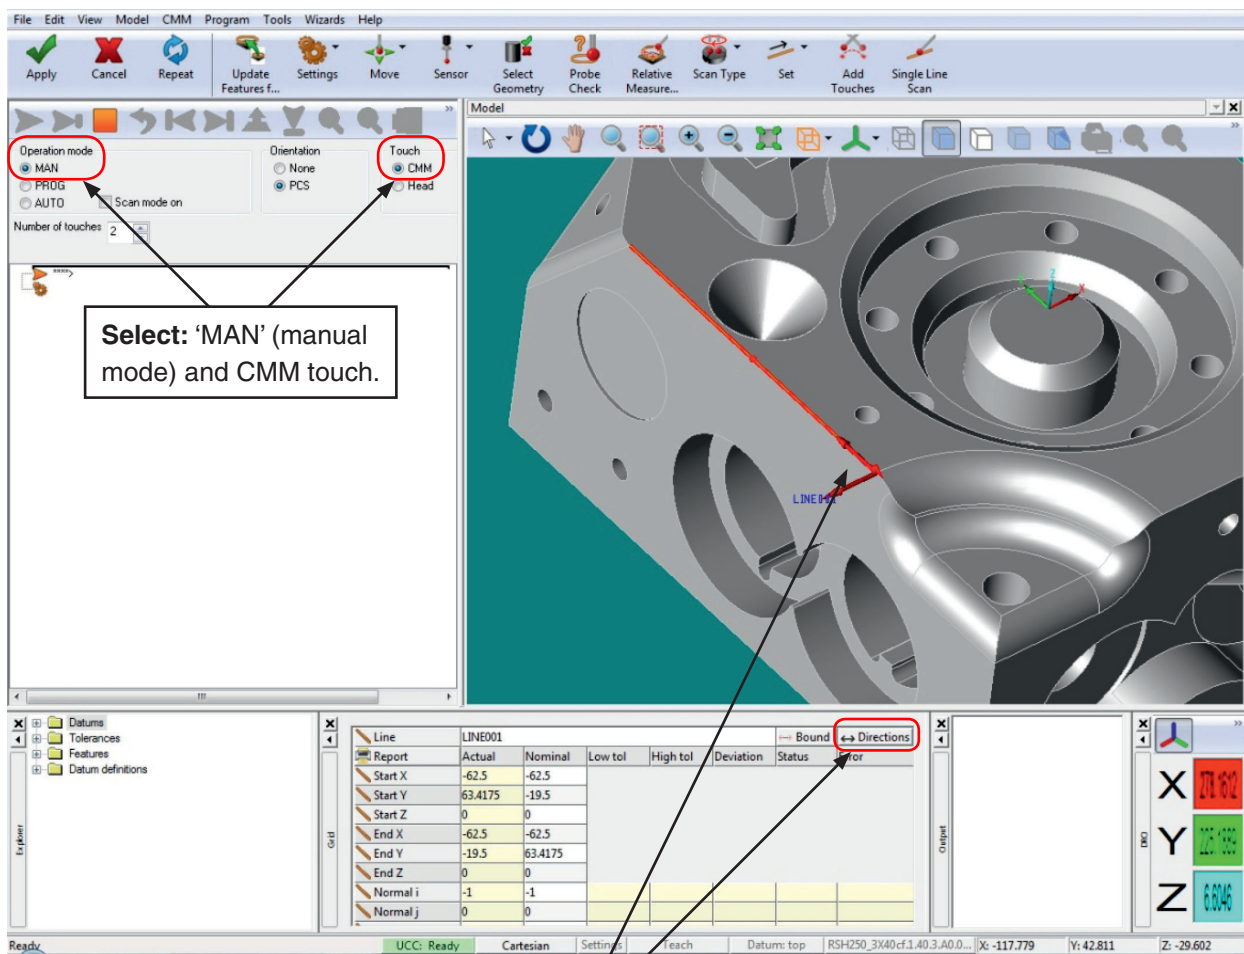

Now take three points on the plane:

To create a primary axis on this feature click 'Datum' then select 'One Axis':

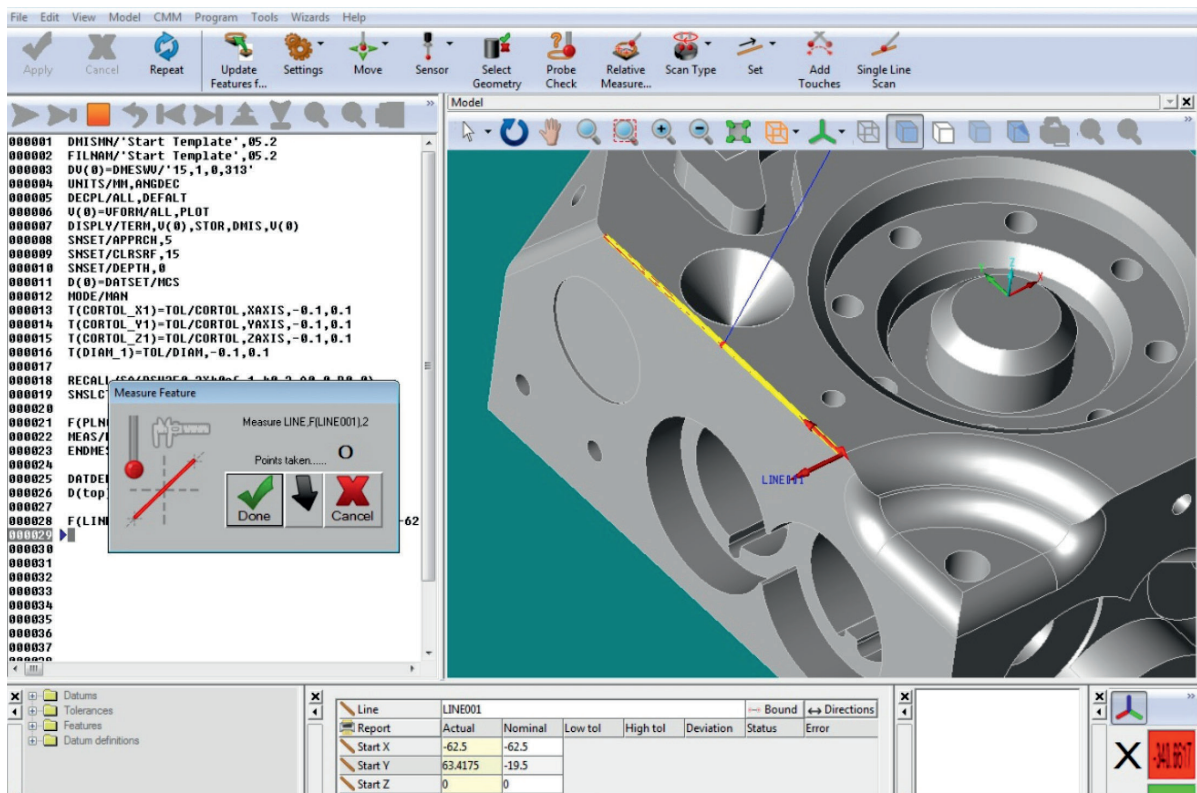

Select the line to inspect:

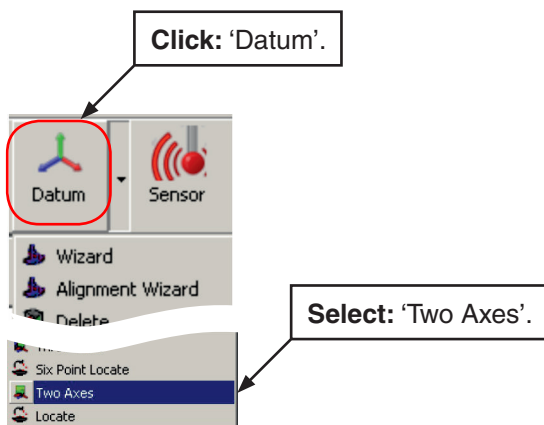

Make sure the direction of the vector is correct by cycling through the directions tab.

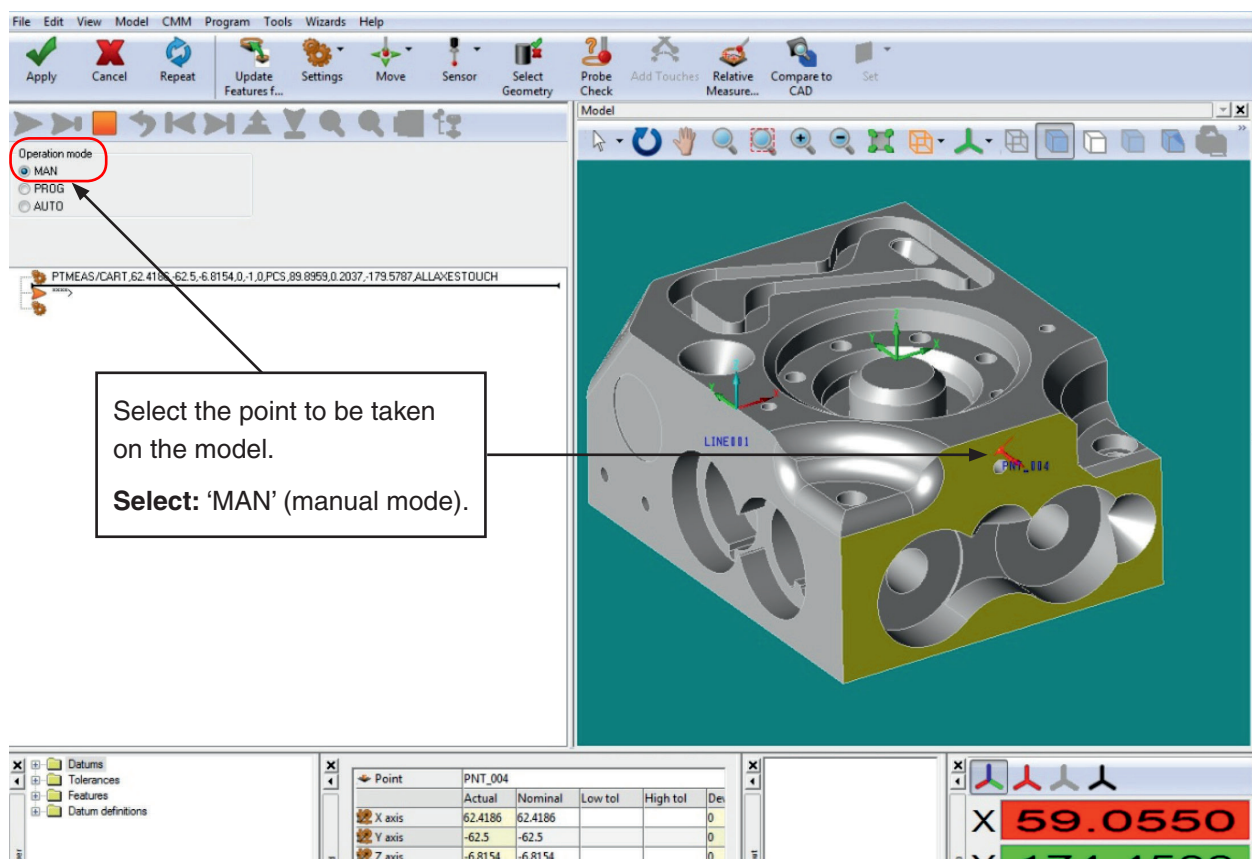

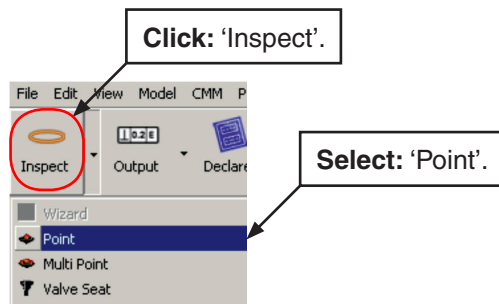

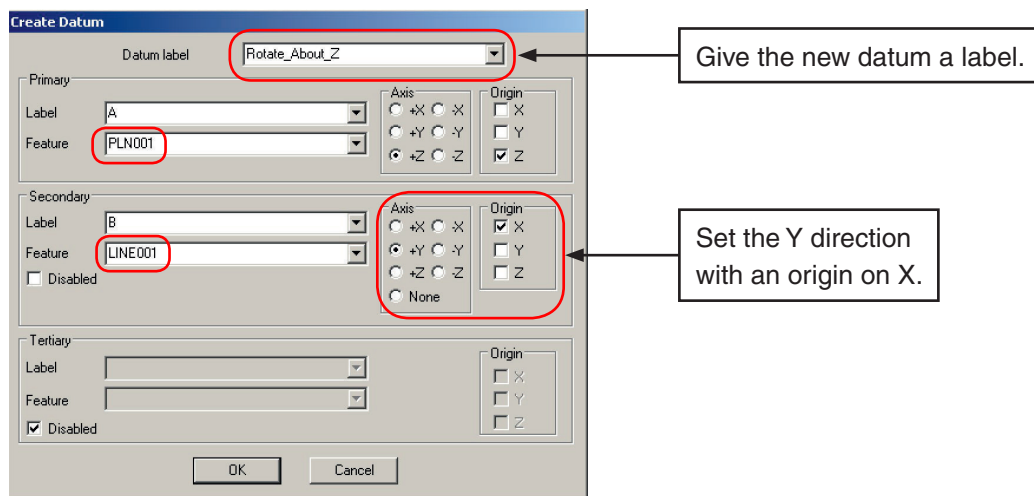

**NOTE:** It is very important to take note of the direction when taking the points i.e. front to back, back to front, left to right, right to left, + to - and - to +. This has a direct effect on the vector of the measured line and subsequent orientation of the part. If the next part is measured in the opposite direction then the part coordinate system would be rotated 180 degrees away from the original.

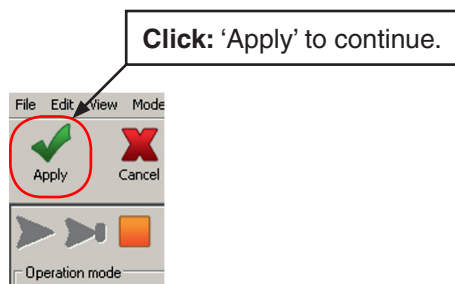

Measure feature:

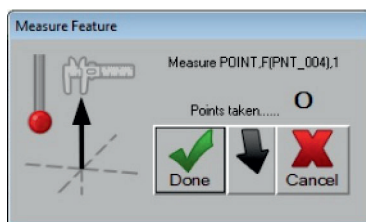

To create a secondary axis on this feature click on 'Datum' then select 'Two Axes':

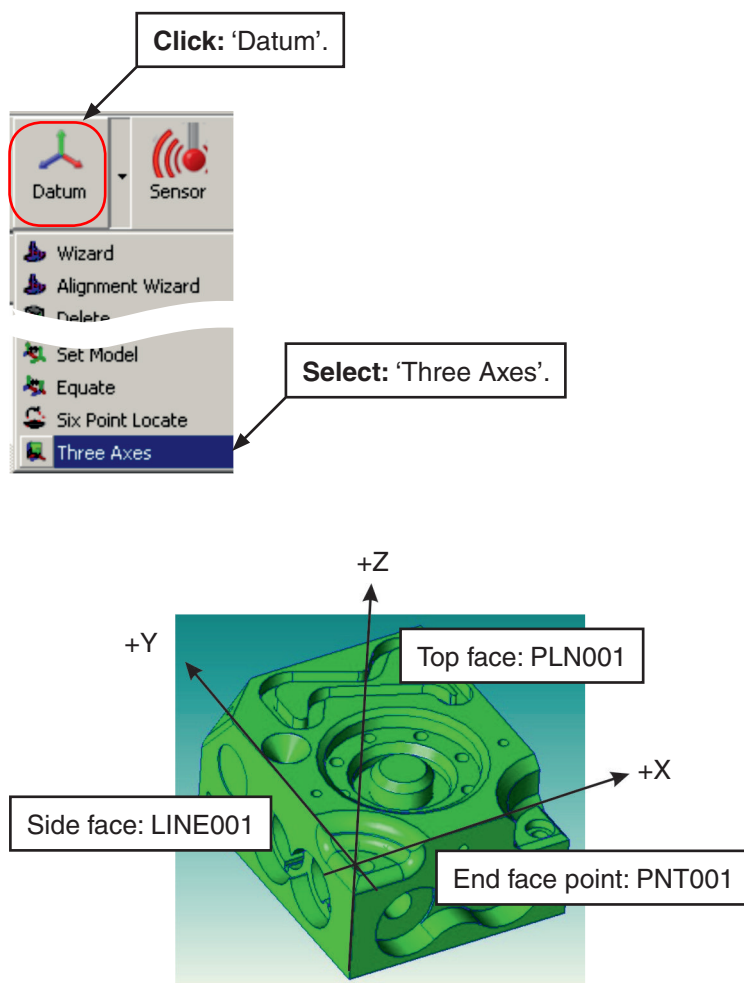

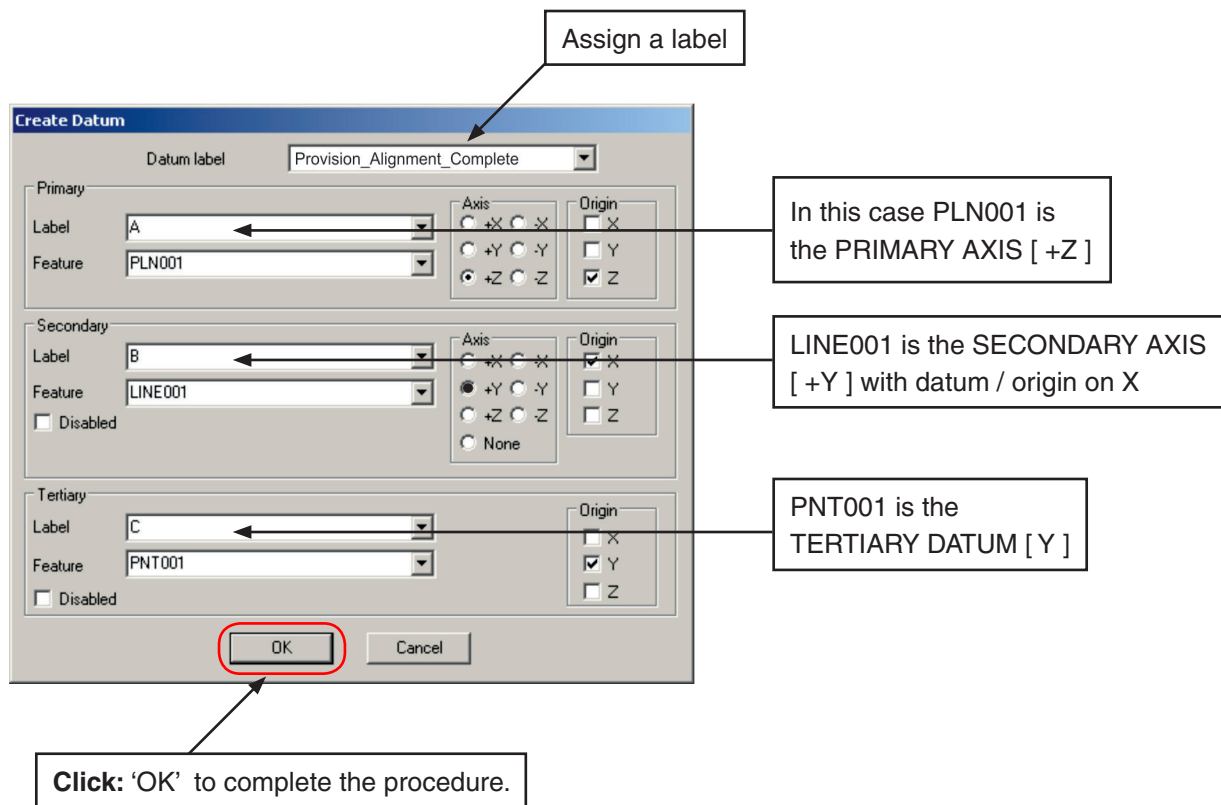

Measure feature:

To complete the alignment using the features measured click 'Datum' then select 'Three Axes':

Finally click on 'Datum' then select 'Save' to complete the alignment process.
